

Simplify Receivables Across Payment Channels

Deliver a more efficient, secure, and connected receivables experience for your institution and the commercial clients you support.

Many banks and credit unions still manage receivables through separate systems for paper, digital, and online payments—creating manual work, higher exception rates, and inconsistent workflows. The result: delayed posting and mounting pressure to modernize.

CheckAlt's Integrated Receivables solution unifies the way treasury and operations teams access and manage receivables, giving them a more efficient, controlled, and connected experience across every payment type.

Integrated Receivables: A Consistent Experience Across All Channels

CheckAlt's Integrated Receivables solution brings together the receivables products financial institutions rely on—Lockbox, Electronic Lockbox, Online Payments, and Remote Deposit Capture—into one connected experience. This unified approach improves visibility, strengthens control, and simplifies support for internal teams and commercial clients.

- **Traditional Lockbox:** Process traditional check receivables with secure capture and exception handling.
- **Electronic Lockbox:** Keep online banking bill-pay items digital from initiation to posting.
- **Online Payments:** Collect ACH, debit, and credit card payments through a secure hosted channel.
- **Remote Deposit Capture:** Digitize check payments on-site via desktop scanner or mobile/API capture.

What Sets Integrated Receivables Apart

- **One access point** for all CheckAlt receivables products, reducing dependence on multiple vendor portals and tools.
- **Automation and configurable rules** to cut exceptions, speed onboarding, and reduce manual intervention.
- **Consistent workflows and visibility** across channels, supporting both commercial receivables and your institution's own inbound payments.
- **Small-business deposit support** via desktop or API-based capture, expanding receivables capabilities without requiring a full lockbox implementation.
